Attention: Fabienne Faskel

Dear Fabienne,

**DESALINATION TWO: SUBMISSION FOR BASELINE ACOUSTIC MONITORING**

Further to your enquiry, we provide herewith a scope of work and fee proposal for acoustic consultancy with respect to the above project.

It is understood that background noise monitoring is required to permit an understanding of existing background noise levels and to permit a later comparison of background noise levels once the project is operational.

The scope of work for the project is deemed to be as follows:

1. Deploy four statistical noise loggers at boundary locations of the proposed plant for a period of 2 weeks. The loggers should measure hourly statistical noise data including Lmax, LA1, LA10 and LA90 on the 'slow response' setting.
2. Deploy a statistical noise logger at a nominated location (WAWA site) on the northern edge of Binningup, and on the southern end of Myalup townsites, located to avoid as far as practical the influence of any local noise sources. Measurements to be concurrent with the measurements in item 1.
3. Site inspection and observations as appropriate while on site.
4. Report outlining background noise environment and provision of baseline acoustic data in micro-soft excel format (electronic). Report to be collated with site wind data to be provided by yourselves in electronic (microsoft excel) format.
