

QUICK SERVICE RESTAURANTS – PUB 33

For the purpose of this publication quick service restaurant specifically means the following chains:

- KFC
- Hungry Jacks
- Red Rooster
- Chicken Treat
- McDonalds
- Sizzlers
- Chooks Fresh & Tasty

Industrial Waste Permit

The listed premises require an industrial waste permit in order to discharge the wastewater from their food preparation areas to sewer. The permit attracts an annual permit charge.

Application forms and supporting information can be downloaded from our website.

Quality-Quantity Usage Charges

The Water Corporation has carried out an investigation to determine the quality and quantity of industrial wastewater discharged to sewer from the grease traps of these premises. Quality-quantity charges for individual stores are based on this model and are calculated from incoming water supply volumes.

These quality-quantity charges are levied quarterly in arrears.

Quality-quantity charges are not presently applied to stores located in food courts or food halls. These outlets trade under restricted shopping centre operating hours, have no direct external access by the public, and may share a common grease trap with other food hall tenants.

Please refer to our information brochure 'Food Outlets in Shopping Centres and Other Buildings' (PUB24), which can be downloaded from our website.

Pre-treatment and Plumbing Requirements

All wastewater generated from any quick service restaurant is to discharge to an approved pre-treatment fixture, for the purpose of removing excessive fats, oils and greasy waste, and settleable solids that may otherwise enter the Water Corporation's sewerage system.

Refer to Typical Drawing for the Construction and Installation of Grease Arrestors (HX33-010-00) which provides details of a suitable arrangement. This can be downloaded from our website.

All water supply and wastewater connections associated with the facility must be carried out by a licensed plumber in accordance with AS/NZS3500.
