**NOTES:**

- The entire tank, including baffles, is constructed of Paneltim construction panel. Pipe nozzles are Polyethylene or Polypropylene.
- Internal support braces are generally 150 x 50mm and the same width as the tank. They do not interfere with internal waste separation.
- Installation and burial procedures must be conducted in accordance with the Viking Paneltim Tank Installation Guidelines For Below-Ground Installations. Paneltim Tanks are designed and engineered to be installed without the need for concrete back-fill.
- Tanks must be installed according to Water Corp grease arrestor installation guidelines.
- The relevant authority must approve the proposed location of a grease interceptor prior to its installation.
- A program for regular maintenance and cleaning should be established with an authorised waste collection contractor.
- The tank design conforms to approved design drawings as issued by Water Corporation WA. We recommend the appropriateness of the tank design and its proposed location be verified for use by the local Water Authority prior to order placement.

**Larger sizes and custom made tanks are available on request.**
